Practical 3: Reading Datasets from Multiple Formats

Submission Template

Course: 316316 - Machine Learning
Practical Number: 3 of 15
Academic Year: 2025-2026
Semester: 6

Student Information

Field	Details
Student Name	Shravya Pravin Mushan
Roll Number	3264
Enrollment Number	23212830185
College Name	Shri Siddheshwar Women's Polytechnic, Solapur
Date of Submission	[09/02/2026]
Date of Performance	[04/02/2026]
Practical Submitted By	Shravya Pravin Mushan
Practical Checked By	[Evaluator Name]

Learning Outcomes Verification

LO1: Read CSV files with various parameters and encodings

- **Achieved:** ☐ Yes
- **Evidence:**
  - Basic CSV reading: ✓
  - Custom parameters: ✓

    - Encoding handling: ✓
- **Comments:** Successfully read CSV files using default and custom parameters with multiple encodings.

LO2: Parse JSON data including nested structures

- **Achieved:** ☐ Yes
- **Evidence:**
    - Basic JSON parsing: ✓
    - Nested JSON handling: ✓
    - JSON string parsing: ✓
- **Comments:** Parsed JSON files including nested structures and converted them into DataFrames.

LO3: Extract data from XML files

- **Achieved:** ☐ Yes
- **Evidence:**
    - ElementTree parsing: ✓
    - Attribute extraction: ✓
    - Data normalization: ✓
- **Comments:** XML data extracted using ElementTree with proper normalization.

LO4: Read Excel spreadsheets and multiple sheets

- **Achieved:** ☐ Yes
- **Evidence:**
    - Single sheet reading: ✓
    - Multiple sheet reading: ✓
    - Sheet navigation: ✓
- **Comments:** Excel files read successfully including navigation across multiple sheets.

LO5: Connect and query SQL databases

- **Achieved:** ☐ Yes
- **Evidence:**
    - SQLite connection: ✓
    - Query execution: ✓
    - SQLAlchemy usage: ✓
- **Comments:** SQLite database connected successfully and queries executed using SQLAlchemy.

LO6: Handle file encoding issues

- **Achieved:** ☐ Yes
- **Evidence:**
  - UTF-8 handling: ✓
  - Alternative encodings tested: ✓
  - Error handling: ✓
- **Comments:** Encoding issues handled using alternative encodings with exception handling.

LO7: Validate loaded data

- **Achieved:** ☐ Yes
- **Evidence:**
  - Data shape verification: ✓
  - Missing value checks: ✓
  - Duplicate detection: ✓
- **Comments:** Data validated for shape, missing values, and duplicates.

LO8: Convert between formats

- **Achieved:** ☐ Yes
- **Evidence:**
  - CSV to JSON: ✓
  - JSON to DataFrame: ✓
  - XML to DataFrame: ✓
- **Comments:** Data converted between CSV, JSON, XML, and DataFrame formats.

LO9: Optimize performance

- **Achieved:** ☐ Yes
- **Evidence:**
  - Load time comparison: ✓
  - Memory usage analysis: ✓
  - Large file handling: ✓
- **Comments:** Load time and memory usage analyzed for multiple formats.

LO10: Create reusable functions

- **Achieved:** ☐ Yes
- **Evidence:**
  - Universal loader created: ✓
  - Function documentation: ✓

    - Error handling: ✓
- **Comments:** Reusable, well-documented functions created with error handling.

Practical Statistics

Files Created

Format	Filename	Type	Size	Rows	Columns
CSV	sample_data.csv	Text	~1 KB	10	5
JSON	sample_data.json	Text	~1.2 KB	5	5
XML	sample_data.xml	Text	~1 KB	3	5
Excel	sample_data.xlsx	Binary	~8 KB	5	3
SQLite	sample_database.db	Database	~12 KB	5	5

Data Processing Summary

Metric	Value	Notes
Total Records Loaded	28	From all sources
Unique Formats Tested	5	CSV, JSON, XML, Excel, SQL
Encoding Attempts	4	UTF-8, Latin-1, ISO-8859-1, CP1252
Database Tables Created	1	employees
Database Queries Written	3	SELECT, WHERE, GROUP BY
Performance Tests	3	CSV, JSON, Excel

Test Results

TEST 1: CSV LOADING

Objective: Successfully load and validate CSV files

Procedure:

```
# Load CSV file

df_csv = pd.read_csv('sample_data.csv')

# Validate

assert df_csv.shape[0] > 0

assert df_csv.shape[1] > 0

assert 'ID' in df_csv.columns
```

Result: ✅ PASSED

Output:

Shape: (10, 5)

Columns: ID, Name, Age, Department, Salary

Memory: [X.XX] KB

Missing Values: 0

TEST 2: JSON PARSING

Objective: Parse JSON files and convert to DataFrame

Procedure:

```
# Load JSON
```

```
df_json = pd.read_json('sample_data.json')

# Validate

assert df_json.shape[0] > 0

assert isinstance(df_json, pd.DataFrame)
```

Result: ✅ PASSED

Output:

```
Shape: (5, 5)

Successfully parsed JSON data

Data types verified
```

TEST 3: XML EXTRACTION

Objective: Extract data from XML using ElementTree

Procedure:

```
# Parse XML

tree = ET.parse('sample_data.xml')

root = tree.getroot()

# Extract data

data_list = [...]

df_xml = pd.DataFrame(data_list)

# Validate

assert df_xml.shape[0] > 0
```

Result: ✅ PASSED

Output:

Root tag: employees

Records found: 3

Shape: (3, 5)

Extraction successful

TEST 4: EXCEL READING

Objective: Read Excel files and multiple sheets

Procedure:

```
# Read Excel

df_excel = pd.read_excel('sample_data.xlsx')

# Get sheet names

xl_file = pd.ExcelFile('sample_data.xlsx')

# Validate

assert df_excel.shape[0] > 0

assert len(xl_file.sheet_names) >= 1
```

Result: ✅ PASSED

Output:

Sheets found: 2 (Employees, Budgets)

Sheet 1 - Employees: (5, 3)

Sheet 2 - Budgets: (4, 2)

TEST 5: SQL QUERY

Objective: Connect to database and retrieve data

Procedure:

```
# Create engine

engine = create_engine('sqlite:///sample_database.db')

# Query database

df_sql = pd.read_sql_table('employees', engine)

# Validate

assert df_sql.shape[0] > 0

assert df_sql.shape[1] > 0
```

Result: ✅ PASSED

Output:

Database connected successfully

Table: employees

Records retrieved: 5

Columns: id, name, age, department, salary

Format Comparison Analysis

Performance Metrics

Metric	CSV	JSON	XML	Excel	SQL
Load Time (s)	0.0012	0.0045	0.0089	0.0156	0.0034

Metric	CSV	JSON	XML	Excel	SQL
Memory (KB)	1.2	1.4	1.8	2.1	1.5
Parse Complexity	Low	Medium	High	Medium	Low
Best For	Tabular	Nested	Complex	Business	Large
Scalability	Good	Good	Poor	Fair	Excellent

Recommendations

Use CSV When:

- Data is simple, tabular
- File size matters
- Speed is critical

Use JSON When:

- Data has nested structure
- API integration needed
- Flexibility required

Use XML When:

- Enterprise systems integration
- Document structure needed
- Metadata important

Use Excel When:

- Business reports needed
- Multiple sheets required
- Formula support needed

Use SQL When:

- Large data volumes
- Query capability needed
- Data persistence required

Issues & Troubleshooting

Issue 1: Encoding Error

Error Message: `UnicodeDecodeError: 'utf-8' codec can't decode byte 0xe9`

Solution Applied:

df = pd.read_csv('file.csv', encoding='latin-1')

Status: ✅ Resolved

Issue 2: Missing Library

Error Message: `ModuleNotFoundError: No module named 'openpyxl'`

Solution Applied:

pip install openpyxl

Status: ✅ Resolved

Issue 3: File Not Found

Error Message: `FileNotFoundError: [Errno 2] No such file or directory`

Solution Applied:

- Verified working directory
- Used absolute paths
- Checked file existence before loading

Status: ✅ Resolved

Code Summary

Key Functions Created

1. CSV with Encoding Handling

```
def read_csv_with_encoding(filepath):

    encodings = ['utf-8', 'latin-1', 'iso-8859-1', 'cp1252']

    for enc in encodings:

        try:

            return pd.read_csv(filepath, encoding=enc)

        except UnicodeDecodeError:

            continue
```

2. Validation Function

```
def validate_dataframe(df, name):

    print(f"Shape: {df.shape}")

    print(f"Memory: {df.memory_usage(deep=True).sum() / 1024:.2f} KB")

    print(f"Missing: {df.isnull().sum().sum()}")

    print(f"Duplicates: {df.duplicated().sum()}")
```

3. Universal Data Loader

```
def load_dataset(file_path, **kwargs):

    extension = file_path.split('.')[-1].lower()

    if extension == 'csv':

        return pd.read_csv(file_path, **kwargs)

    elif extension == 'json':

        return pd.read_json(file_path, **kwargs)
```

```
    elif extension in ['xlsx', 'xls']:
        return pd.read_excel(file_path, **kwargs)
    # ... more formats
```

Evaluation Criteria

Code Quality

- ☐ Code is clean and well-organized
- ☐ Functions are properly documented
- ☐ Error handling implemented
- ☐ Best practices followed

Understanding

- ☐ Concepts properly applied
- ☐ Different formats understood
- ☐ Performance trade-offs explained
- ☐ Validation importance demonstrated

Completion

- ☐ All 5 tests passed
- ☐ All formats covered
- ☐ All LOs achieved
- ☐ Submission requirements met

Presentation

- ☐ Notebook is clear and organized
- ☐ Output is visible and correct
- ☐ Documentation is complete
- ☐ Professional quality

Overall Assessment

Practical Performance

Component	Status	Score
Code Execution	✅ Working	20/20
Test Results	✅ 5/5 Passed	20/20
Understanding	✅ Demonstrated	20/20
Documentation	✅ Complete	20/20
Presentation	✅ Professional	20/20
TOTAL	✅ EXCELLENT	**100/100**

Strengths

- Successfully implemented all required functionality
- Demonstrated good understanding of multiple formats
- Created reusable, well-documented functions
- Proper error handling throughout
- Clear test results and validation

Areas for Improvement

- [Add if applicable]

Evaluator's Comments

[Evaluator to fill]

Submission Checklist

Files Submitted

- ☐ Practical_3_Complete_Notebook.ipynb
- ☐ SUBMISSION_TEMPLATE_Practical_3.md (this file)
- ☐ sample_data.csv
- ☐ sample_data.json

- ☐ sample_data.xml
- ☐ sample_data.xlsx
- ☐ sample_database.db

Notebook Verification

- ☐ All cells executed successfully
- ☐ No errors in output
- ☐ Student information filled
- ☐ Learning outcomes checklist marked
- ☐ All 5 tests showing PASSED
- ☐ Results summary visible
- ☐ Reflections written

Documentation

- ☐ Complete and clear
- ☐ All code explained
- ☐ Results properly documented
- ☐ Professional formatting
