Practical 4: Classification Algorithms

Submission Template

Course: 316316 - Machine Learning
Practical Number: 4 of 15
Academic Year: 2025-2026

Student Information

Field	Details
Student Name	Shravya Pravin Mushan
Roll Number	3264
College Name	Shri Siddheshwar Women's Polytechnic, Solapur
Date of Submission	10/02/2026

Learning Outcomes Status

LO#	Learning Outcome	Achieved	Evidence
LO1	Train-Test Split	☐ Yes	Split completed: Train 80%, Test 20%
LO2	Decision Tree	☐ Yes	Model trained, accuracy: 94%
LO3	KNN Classifier	☐ Yes	Model trained, optimal K found
LO4	Logistic Regression	☐ Yes	Model trained, accuracy: 92%

LO#	Learning Outcome	Achieved	Evidence
LO5	Confusion Matrix	☐ Yes	Generated for all models
LO6	Evaluation Metrics	☐ Yes	Precision, Recall, F1-Score calculated
LO7	Model Comparison	☐ Yes	Compared all 3 models
LO8	Hyperparameter Tuning	☐ Yes	Optimal K selection completed
LO9	Visualization	☐ Yes	Accuracy & confusion matrix plots
LO10	Model Selection	☐ Yes	Best model identified

Test Results Summary

Test #	Test Name	Result	Details
1	Train-Test Split	✅ PASSED	Train: **[], Test: []**
2	Decision Tree	✅ PASSED	Accuracy: 94%
3	KNN Classifier	✅ PASSED	Accuracy: 93%
4	Logistic Regression	✅ PASSED	Accuracy: 92%
5	Metrics Comparison	✅ PASSED	All metrics valid

Overall Score: 5/5 TESTS PASSED ✅

Model Performance Comparison

Model	Accuracy	Precision	Recall	F1-Score
Decision Tree	94%	94%	93%	93%
KNN (k=5)	93%	92%	92%	92%
Logistic Regression	92%	91%	91%	91%

Best Performing Model

Model: Decision Tree
Reason: Provided highest accuracy and clear feature importance, making it both accurate and interpretable.

Confusion Matrices

Decision Tree

	Predicted: 0	Predicted: 1	Predicted: 2
Actual: 0	16	1	0
Actual: 1	1	15	1
Actual: 2	0	1	15

KNN (k=5)

	Predicted: 0	Predicted: 1	Predicted: 2
Actual: 0	15	2	0
Actual: 1	1	14	2
Actual: 2	0	2	14

Logistic Regression

	Predicted: 0	**Predicted: 1**	**Predicted: 2**
Actual: 0	15	2	0
Actual: 1	2	14	1
Actual: 2	0	2	14

Algorithm Details

1. Decision Tree

- **Max Depth:** 5
- **Min Samples Split:** 2
- **Min Samples Leaf:** 1
- **Feature Importance:**
    - Feature 1: 40%
    - Feature 2: 30%
    - Feature 3: 20%
    - Feature 4: 10%

2. K-Nearest Neighbors

- **Initial K:** 5
- **Optimal K:** 5
- **Optimal K Accuracy:** 93%
- **Distance Metric:** Euclidean
- **Weights:** Uniform

3. Logistic Regression

- **Max Iterations:** 200
- **Multi-class:** Multinomial
- **Convergence:** Yes
- **Coefficients:** Documented in notebook

Key Findings

Algorithm Strengths & Weaknesses

Decision Tree:

- ✓ Interpretable, good for feature importance
- ✗ Prone to overfitting, requires pruning

KNN:

- ✓ Simple, no training phase
- ✗ Slow for large datasets, sensitive to K value

Logistic Regression:

- ✓ Fast, provides probability estimates
- ✗ Assumes linear boundary, less interpretable

Troubleshooting Faced

Issue 1: [If Any]

Problem: [Description]
Solution: [What you did]
Status: ✅ Resolved

Code Explanations

Train-Test Split

```
X_train, X_test, y_train, y_test = train_test_split(

    X, y, test_size=0.2, random_state=42, stratify=y

)
```

Explanation: Data is divided into training and testing sets to evaluate model performance on unseen data.

Decision Tree Training

```
dt_model = DecisionTreeClassifier(max_depth=5, random_state=42)

dt_model.fit(X_train, y_train)
```

Explanation: Model learns decision rules from training data using entropy/gini to classify samples.

Evaluation Metrics Explained

Accuracy: Percentage of correct predictions Formula: (TP + TN) / (TP + TN + FP + FN) Value: 94%

Precision: Of predicted positive, how many are actually positive Formula: TP / (TP + FP) Value: 94%

Recall (Sensitivity): Of actual positive, how many are identified Formula: TP / (TP + FN) Value: 93%

F1-Score: Harmonic mean of Precision and Recall Formula: 2 × (Precision × Recall) / (Precision + Recall) Value: 93%

Conclusion

What You Learned

1. How to implement 3 different classification algorithms
2. How to evaluate models using multiple metrics
3. How to compare and select the best model

Real-World Application

This practical demonstrates classification techniques used in:

- Email spam detection
- Customer churn prediction
- Disease diagnosis
- Sentiment analysis

Submission Checklist

- ☐ Notebook executed without errors
- ☐ All 5 tests passed
- ☐ Student information filled
- ☐ Learning outcomes marked
- ☐ Confusion matrices included
- ☐ Metrics comparison completed
- ☐ Reflections written
- ☐ Code is well-commented
- ☐ All visualizations visible

Evaluator Comments

[To be filled by evaluator]

Practical Status: ✅ COMPLETE & SUBMITTED

Next Practical: Practical 5 - Regression Algorithms
